Course Presentation

We want to welcome you to the second edition of the course CLEFT BARCELONA:

“Integrated management of the cleft patients with live surgeries” in Hospital Sant Joan de Déu – Barcelona Children’s Hospital. We’re excited to share with you our philosophy of treatment of the cleft patient during 5 intense days where you will have the opportunity to know directly in the operating room the different surgeries of the cleft patient: from the primary lip and palatal closure until the alveolar bone graft, orthognathic and rhinoplasty.

The reason for this course is to allow a reduced group of people know firsthand the different phases and treatment protocols of the cleft patient in a week. It will be given to a group of 5 people so they can observe better the surgeries during four days and the fifth day participate in sessions with a practical approach.

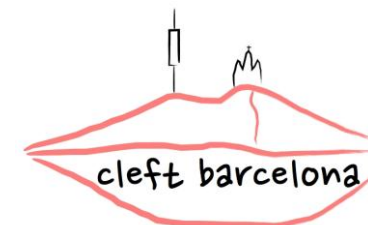

Many surgeons can’t visit our center for a long period of time given its obligations and responsibilities; by this you will know the philosophy of the Sant Joan de Déu team concentrated in a week.
